

Your First AI-Powered Job Application

You have the Blueprint, the Resume Template, the Checklist and the Tracker. This guide tells you exactly what to open and in what order, so you finish one properly optimized application in a single sitting.

What to have open

The AI Job Search Blueprint the prompts (P1 to P50)	AI-Ready Resume Template open in Word or Google Docs	Job Application Tracker printed, plus a pen	An AI chat tool and one real job posting
---	--	---	--

Do not read everything first. Just follow steps 1 to 8 in order. Three rules apply throughout: **(1)** use real information only, and never let AI add skills, tools, numbers or jobs you do not have; **(2)** never paste ID numbers, bank details or your full home address into an AI tool; **(3)** one job gets one tailored resume. Never reuse it for another job.

STEP

1

5 min

Choose ONE target role

- Write down one role title you would genuinely like to apply for, for example "Data Analyst Intern" or "Marketing Executive".
- Not sure? Run P6 with your background and choose one role from its "Strong matches" list.
- Ignore every other role for now. One role, one application.

USE

P6

Done when: your target role is written in one line.

STEP

2

15 min

Open the AI-Ready Resume Template and prepare your resume

- Open the template in Word or Google Docs and save a copy called MasterResume_v1.
- Replace every [bracket] with your real details. No work experience? Use projects, internships, coursework, clubs and volunteering.
- For weak bullets use P3 or P13, and P12 for your summary. Delete any section you cannot fill honestly.

USE

Resume Template

P3

P12

P13

Done when: you have a complete one-page resume with no [brackets] left.

STEP

3

5 min

Pick ONE real job description

- Find a live posting for your target role that you would genuinely apply for.
- Copy the full text into a new document: title, responsibilities and requirements.
- If it is very long, keep only the title, responsibilities and requirements.

Done when: the job description is saved and ready to paste.

STEP

4

10 min

Compare your resume with the job

- Run P17 with your resume and the job description to get a table of requirements, evidence and match strength. Or run P9 for a fit score and a recommendation on whether to apply.
- Write down your top 3 matches and top 3 gaps.
- Separate gaps that are truly missing from gaps that are simply not written on your resume yet.

USE

P17

P9

Done when: you know your 3 strongest matches and 3 biggest gaps.

STEP

5

15 min

Improve your resume for this job

- Run P18 to see where you can honestly use the employer's wording and clarify what you already did.
- Accept a suggestion only if it is true. Skip anything about skills or tools you do not have.
- Want a full rewrite? Run P15, then compare it with your original and keep only changes you can stand behind.

USE

P18

P15

Done when: a tailored copy is saved with the company name in the file name.

STEP

6

10 min

Check before you submit

- Run P19 to see the top 5 reasons this application could be rejected, and fix the 3 that matter most.
- Run P20 for a final check of errors, unsupported claims and missing information.
- If the application asks for a cover letter or written answers, use P27 or P28.

USE

P19

P20

P27

P28

Done when: every claim is true and you could explain it in an interview.

STEP

7

10 min

Submit your application

- Save your resume as a PDF unless the portal asks for Word. Name it FirstName_LastName_Role.
- Apply through the company careers page or the official job portal.
- Save the confirmation screen or confirmation email.

USE

Checklist

Done when: the application is submitted and the confirmation is saved.

STEP

8

5 min

Record it in the Job Application Tracker

- Write the company, role, date applied, source, and which resume version you sent.
- Circle A (Applied) in the Status column.
- Set a follow-up date 5 to 7 days from today. P47 will help you write the message.

USE

Tracker

P47

Done when: the application is logged with a follow-up date.

You just completed the full loop

You now have a resume, a tailored application, and a tracker entry. That is the exact loop you will repeat.

- **Application #2** is faster: repeat steps 3 to 8 only, in about 45 minutes.
- **Follow up** in 5 to 7 days using P47, and update your Tracker.
- **Want a routine?** Start the 30-Day AI Job Search Implementation Plan. Since you already have a resume and one application, you can move quickly through Days 1 to 10.

If you get stuck

If this happens	Do this
AI added skills or numbers I do not have.	Delete them. Add "Use only the information I provided and flag anything you add" to your prompt, then run it again.
I have no work experience.	Use projects, internships, coursework, clubs and volunteering. Tell the AI: "I am a fresher and my background is projects and coursework."
The answer is too generic.	Add specifics: your target role, the full job description, and 2 or 3 real examples of your work.
I do not meet every requirement.	Apply if you match the core requirements. P9 is written so it will not reject you just for missing preferred ones.
My resume is longer than one page.	Cut the least relevant items first and keep your strongest 3 to 4 bullets per entry.
